

◆ STARTUP MESSAGE

```
console.log("GLOBAL Spam Detector Running");
```

Word-by-word

console

→ built-in object

Used for:

printing messages
debugging
logging information

log()

→ predefined method of console

Used for:

displaying text in browser console

"GLOBAL Spam Detector Running"

→ string

Message to display

What happens?

When extension/script starts:

GLOBAL Spam Detector Running

appears in browser Developer Console.

Used only for testing/debugging.

◆ CREATE FUNCTION

```
function getEmailText() {
```

Word-by-word

```
function
```

→ keyword

Used to create a function.

Similar idea to Python:

```
def
```

```
getEmailText
```

→ function name

You chose this name.

Could have been:

```
abc
xyz
readEmail
```

But:

```
getEmailText
```

describes its purpose.

```
()
```

→ parameter list

No parameters passed.

```
{
```

→ start of function body

Purpose

```
Read email content from Gmail page
```
